JEMMI EPRIADI

SOFTWARE DEVELOPER

ABOUT ME

A highly motivated Software Engineer with 3 years of experience in developing robust and scalable applications. Proficient in Full-Stack Development, with expertise in React, PHP Laravel, Spring Boot, & Go. Skilled in building web applications, fixing bug, & optimizing transaction processing systems for fintech and startup sector. Led a team to resolve critical production issues, improving productivity by 40%. Eager to take on new challenges and contribute my skills to innovative software solutions

EXPERIENCE

Backend Engineer
Kredit Pintar Indonesia | August 2025 - Present
A fintech P2P lending company using AI-driven credit scoring to serve millions of underbanked customers in Indonesia

- Designed and developed scalable microservices for the loan origination system using Java, Kotlin, Spring Boot, and Groovy, serving 10,000+ monthly loan applications.
- Engineered a cost-prioritization algorithm for SMS/push notifications, reducing monthly operational costs by 15% while maintaining >99% delivery coverage for high-priority users.
- Containerized services with Docker and managed deployments on Kubernetes, reducing environment-specific incidents by 30%

Backend Engineer
Astra Welab Digital Arta (Maucash) | August 2023 - July 2025
Fintech company specializing in P2P lending and B2B financing solutions through machine-learning–driven credit scoring and automated loan approvals.

- Built system development and online loan applications with Java Spring Boot, MyBatis, Dubbo, Redis, RabbitMQ/Kafka
- Integrated cashflow management system with 5 major banks and payment gateways in Indonesia to streamline transactions
- Designed auto-reject system for loan applications, cutting 40% manual review time and enhancing risk assessment accuracy.
- Investigated, resolved, and deployed production bugs, driving a 40% increase in system productivity.
- Developed and maintained payment and KYC systems, ensuring compliance, security, and high availability.

Full Stack Engineer
Segari | June 2022 - February 2023
One of Indonesia's fastest-growing grocery e-commerce startups, providing a seamless marketplace for fresh, locally-sourced products.

- Developed and maintained web applications, specializing in both front-end and back-end to support business operations.
- Worked together with other Engineers to debug, maintained, and created features in the App with React, Java, Flutter.
- Created Promo Whitelist that is used by marketing team to register user for certain promo.
- Built SEO for marketing team to be used in customer web app.
- Collaborated with other Engineer to create page restructuring.

PROJECTS

- Developed a Stock Management System with PHP and MySQL to track inventory levels, enabling real-time updates and improving accuracy.
- Created a blog application with user authentication, allowing users to write and upload blogs, using Laravel and MySQL.
- Developed a photography app with Laravel, connecting clients and photographers for seamless interaction via an integrated chat feature.
